The main problem investigated in this study is how the Cost Recovery Rate for Inpatients Participants of the National Health Insurance (Jaminan Kesehatan Nasional/JKN) at Ilagaligo Regional Hospital East Luwu Regency. The objective of this study was to analyze the Cost Recovery Rate of inpatients of JKN participants at Lagaligo Regional Hospital through aspects of tariff setting, hospital income, cost recovery rate, total cost.

This study applied a qualitative descriptive approach. The data collected through observation, interviews and document review and then analyzed in depth to obtain information related to the Cost Recovery Rate of JKN inpatients.

The results of the study showed that the Cost Recovery Rates for Inpatients of JKN Participants (1) The cost for I Lagaligo Hospital were determined by the local government in the form of the East Luwu Regional Regulation for general patients and the tariffs for JKN patients referred to the INA CBG's standard rates, with the calculation mechanism per service package. (2) The revenue of RSUD I Lagaligo, based on cash by recording services/products, for JKN patients after the hospital has carried out the recording process, is submitted to be claimed by BPJS Health in order to get a claim payment. (3) Cost Recovery Rate, mostly from BPJS inpatient services, is not directly proportional to service operational costs. (4) Total Cost, RSUD I Lagaligo implements a management system for the allocation of investment costs, every year it has realized the allocation of financing as needed.
