Before the Regional Apparatus Organization begins the process of acquiring goods and services, it must first have a robust planning system in place so that it can subsequently lead, oversee, and regulate in order to prevent procedural nonconformance. The initial planning process in the procurement of goods and services, as well as the announcement of the General Procurement Plan, is the identification of the need for procurement of goods and services, how to procure goods and services, how to determine procurement of goods and services, schedule for procurement of goods and services, budget for procurement of goods and services. In practice, however, less-than-optimal procedures are sometimes implemented, there are delays in setting the procurement schedule, delays in calculating the RUP, and so on. The purpose of this research is to discover how to arrange the acquisition of products and services in North Luwu Regency. The research method used was descriptive qualitative research. This research indicator is based on Presidential Regulation No. 12 of 2021's Planning of Procurement of Goods and Services. Data collection methods include observations, interviews, and documentation. Techniques Miles and Hubermen analytical techniques are used in data analysis. According to the findings of the research, the execution of procurement of goods and services in North Luwu Regency is fairly good. It's only that there are still technical implementation challenges in the field.
