ABSTRACT

POLICY BRIEF ON THE EFFECTIVENESS OF WASTE BANKS IN REDUCING WASTE PILES IN GOWA REGENCY

Author : Moh. Ambrian Arya Nova
Supervisor : Amir Imbaruddin

Waste banks are a form of waste management program where the process is collected and sorted. Waste management is an activity that aims to reduce the impact of waste generation that continues to accumulate every year, and will be managed carefully to maintain existing sustainability. Based on this problem, this study aims to determine the effectiveness of waste banks in reducing waste piles in Gowa Regency.

The research method used in this study is a qualitative method with a purposive type of research to find out whether the implementation of the waste bank has been fully run in accordance with existing regulations.

Based on the results of research with the head of UPT BSI of Gowa Regency, *the purpose of the formation of a waste bank has been specifically explained in Regent Regulation Number 44 of 2018, and the policy can be said to be almost successful if the community and its* UPT BSI *are provided with adequate facilities. The lack of understanding related to the implementation of waste banks is because there are still those who have not been involved, and the* RT RW *(neighborhood organisations) from several villages still do not provide socialization, education, and training as expected in Regional Regulation Number 6 of 2022.*

Keywords: Waste Bank, Waste Management, Implementation.
