*This study aims to describe the implementation of an AppSheet-based income statement application to support the financial reporting process across multiple branches of the* Kopi Konoha *business. The primary issue addressed is the reliance on a manual financial recording system, which utilizes Excel and physical receipts, resulting in delayed reporting, increased risk of recording errors, and difficulties in consolidating data from various branches.*

*A descriptive method with a qualitative approach was applied in this study. Data collection techniques included in-depth interviews, direct observations, and documentation at the main branch of* Kopi Konoha *in* Tamalate, Makassar.

*The results show that implementing the AppSheet-based application successfully automates daily financial recording in real-time, improves reporting efficiency, minimizes human error, and accelerates data-driven decision-making. The application has successfully presented systematic income statements that are in line with accounting principles and can serve as a model for other Micro, Small, and Medium Enterprises (MSMEs) in managing income statements in a modern and integrated manner.*

*Keywords: Application, Income statement, AppSheet, MSMEs.*
