Beneficiaries of social assistance programs must consult the appropriate data. The key data and reference for the Ministry of Social Affairs in determining recipients is the Integrated Social Welfare Data (DTKS). The quality of data is highly influenced by population dynamics. This necessitates an update via Integrated Social Welfare DataVerification and Validation in accordance with Minister of Social Affairs Regulation Number 3 of 2021 on Social Welfare Integrated Data Management. As a result, the objective of this study was to understand the Mechanism of Verification and Validation of Integrated Social Welfare Data as well as the barriers encountered in Verification and Validation of Integrated Social Welfare Data in Tanahlemo Village, Bontobahari District, Bulukumba Regency.

This study applied a descriptive qualitative approach with data collection strategies such as interviewing, observing, and reviewing research-related materials.

The results of the study showed that the Verification and Validation of DTKS, which began with the Processing of Proposed DTKS Data stages, went well, Community Self-Registration was not yet active, Village Deliberations and Determination of Kelurahan DTKS Proposals were well carried out, the final stage of SIKS-NG input had not been carried out dueto SIKS-NG maintenance, and one of the obstacles encountered in this verification and validation was the lack of unpublished data.

Keywords: DTKS, Update, Verification and Validation
