Implementing an online review of goods/services procurement will make it easier for the South Sulawesi Provincial Government's Selection Working Group (Pokja) and PPK Scope to conduct a review of goods/services procurement because it is accessible at all times and from any location. PPK can conduct a review of the procurement of goods and services concurrently with the Selection Working Group while performing its activities in the areas without having to wait for a specific window of time. There is no need for file cabinets because online review can cut costs and paper use.

In order to describe and analyze phenomena, occurrences, either individually or in groups, this study applied a descriptive qualitative approach. The data collected through interview, observation, and document review.

The result of the study showed that conducting a review of the technical specifications/KAK of goods and services was going according to plan, but for technical work, the selection working groups did not share the same perception because not all of them had technical qualifications and some PPK were non-technical individuals who made it challenging to compile technical specifications. If not done carefully, the preparation and determination of HPS for HPS reviews will involve dangers. It is challenging to decide which form of contract to utilize because PPK has not fully filled out the Special Conditions of Contract (SSKK) in the draft agreement. Risk can be reduced through market analysis review indicators, and HPS preparation is improved with more data, information, and market understanding. In addition, PA/KPA/PPK has announced the RUP data into the Goods/Services Procurement General Planning System (SiRUP) and broadcast through the national procurement portal, and the RUP package ID and budget are in agreement. The process of choosing suppliers of products and services will be influenced by the moment at which the goods are used. The procurement procedure takes less time to implement the closer the time to use the goods or services is.

Key Words : Innovation, Procurement of Government Goods/Services, Review, Online Procurement of Goods/Services
