The rapid advancement of information and technology in the present era requires organizations to promptly adapt to these developments through innovations that result in significant operational changes within the organization, thereby generating the latest operational techniques. One of the innovations offered involves the utilization of vacant library walls as platforms for information dissemination and learning for library visitors, transforming them into windows of knowledge and enhancing the library's ambience. In light of these considerations, this research aims to design and create the "Talking Wall" as an innovation by librarians at the State Agriculture Polytechnic Library of Pangkajene *Islands.*

The research method employed in this study is qualitative, drawing data from informal sources via interviews, observations, and document analysis. Data management includes collection, editing, and the subsequent phases of checking and cleaning. The analytical approach includes data reduction, data display, and conclusion drawing/verification.

The outcome of this research is the innovative thesis product known as the "Talking Wall," akin to wall-mounted banners, backdrops, or photobooth screens, repurposing library walls as decorative elements and media for information delivery.

Keywords: *Innovation, Human Resource Innovation, Library, Talking Wall, Librarians, Utilization of Library Walls.*
