The purpose of this study was to determine the implementation of onboard training management in training ship at Barombong Marrine Polytechnic. The focus of this research is the Head of the Laboratory and Simulator Unit, training instructors or lecturers who are appointed as practical guides, training crews, training participants and training support facilities.

This study applied a descriptive research design with a qualitative approach. The data collected through interview, observation and document review. There were twenty five informants who became the source of information.

The results of the study showed that: 1) Training guidelines are available but these guidelines have not been well socialized. 2) Attitudes and behavior of cadets are good but when the ship experiences bad weather, the attitudes and behavior of the cadets have decreased psychologically. The interest and talent of cadets to become sailors is still low and has not yet been developed. 3) The presence of several instructors accompanying cadets sailing practice on training boats is still lacking. 4). The sailing practice curriculum is appropriate, but the training modules cannot be owned by cadets. 5) Facilities and infrastructure support practical activities.
