The main problem in this study is how to control of drug supply in the pharmacy at I Lagaligo Regional General Hospital East Luwu Regency. The objective of this this study was to understand and assess how the Pharmacy Installation at I Lagaligo Regional General Hospital implements drug supply control in terms of planning, budgeting, procurement, distribution, usage, deletion, and recording.

The study applied a qualitative approach with a descriptive type. The information about the implementation of drug supply control at the Pharmacy Installation at RSUD I Lagaligo was gathered through observation, interviews, and document review, and then studied in depth.

The result of the study showed that the Pharmacy Installation of RSUD I Lagaligo had the following control over medication supply: (1) Drug planning, referring to the I Lagaligo Hospital formulary, which was based on drug use statistics from the previous year. (2) Drug budgeting refers to considerations in accordance with drug and medical device demands; budgeting is stated in the drug needs plan. (3) Drug procurement refers to the current provisions for the acquisition of goods and services. (4) Drug distribution for outpatients and inpatients via the Pharmacy Installation, which uses an individual prescription system. (5) The use of medications based on medical reasons, with the prescription being reviewed again before being served. (6) Drug elimination mechanisms, including generating a list of pharmaceutical formulations, minutes of destruction, and destruction documentation. (7) Drug registration has not been adequately established, and the recording of I Lagaligo Hospital continues to be done manually.
