The analysed in the study was about program implementation. The objective of the study was to understand the implementation of program of urban society empowerment (PNPM-MP) at Kassi-Kassi village of Rappocini sub-district of Makassar.

The study applied a descriptive quantitative method to describe the implementation of the program starting from the problem identification, planning phase, implementation phase, and evaluation and monitoring phase. The data for the study were collected through questionnaires, interviews, observation, and document study. The data were then analysed using frequency tables and percentage and then generalised.

The results of the study showed that the implementation of PNPM-MP in terms of (1) problem identification and socialization with three main indicators namely people meeting, poor reflection, and self-mapping scored 4.02 or categorised as good; (2) planning phase with indicators of village meeting in developing BKM, PJM Pronangkis, and proposals with relevant to local government planning (Musrengbang) scored 3.60 or categorised as good; (3) the implementation aspect scored 3.95 or categorised as good; (4) in the aspect of monitoring and evaluation with indicators of review of PJM Pronangkis, organization review, and budget review scored 3.91 or categorised as good.
