Currently, it is essential that local government operations be carried out in an openness implementation. People's expectations of the quality of a public service will decline if there is no public information disclosure in conjunction with it. Along with the advancement of technology, various facets of life are now using it, particularly in Tawanga Village Office Southeast Sulawesi Province, where manual administration of information services and administrative services is still the norm and a website-based administration information delivery system is required.

The objective of the study was to develop website-based information system to make it easier to disseminate regional information, as well as to simplify and expedite information on Tawanga Sub-District services to the wider community, so that information is received more quickly and can be accessed from anywhere and anytime, and can decrease service time. This study applied a qualitative methodology. The data collected through observation, interviews, and documentation.

The result of the study indicated that this website can be used to assist the Tawanga Sub-District in disseminating information. The general public can easily obtain information in the Tawanga Sub-District, and the services provided to the *community* have been completed quickly and efficiently.
